

Stay comfy for less with up to \$850* in rebates

Lower your home's energy use and live comfortably for less with a high-efficiency furnace and central air conditioner – we'll help with money-saving rebates!

Save \$250 High-efficiency furnace

Benefits of upgrading

- High-efficiency furnaces reduce heating costs by up to **25% per year**[†]
- Improved air quality
- Quieter and more reliable
- Lower your home's carbon footprint

How to qualify

- Oil, electric, natural gas and propane furnaces qualify
- New furnace must be equipped with a variable-speed ECM
- Furnace incentive ends **December 31, 2018**

Save \$30 Circulator pump

Benefits of upgrading

- Circulator pumps significantly increase boiler efficiency and energy savings
- Easy installation
- **99%** of hydronic pumps in radiant heating systems are inefficient

How to qualify

- Must be installed on an existing hydronic heating system and not on a DHW heater
- Must have a variable-speed ECM

Save \$600 ENERGY STAR® certified central air conditioner (CAC)

Benefits of upgrading

- Use up to **20% less** electricity[†] with a new ENERGY STAR® CAC
- Newer models are more reliable and less prone to breakdowns
- Quieter and more eco-friendly

How to qualify

- Must be ENERGY STAR® certified, minimum 18 SEER /13 EER rating
- Must have a qualifying indoor coil

How the program works

- 1** Work with a participating contractor to purchase and install your new equipment **before December 31, 2018**
- 2** Your contractor must submit your online rebate form by **February 1, 2019**
- 3** **Before February 28, 2019**, email your proof of purchase to: hvacpayments@summerhill.com
- 4** You'll receive your rebate cheque in approximately 8-12 weeks

or mail to:
Save on Energy Incentives
30 Commercial Road
Toronto, ON M4G 1Z4

Subject to additional terms and conditions found at saveonenergy.ca. †Incentives are available for installation of eligible equipment completed between Jan. 1 and Dec. 31, 2018 and submitted no later than Feb. 1, 2019. Equipment must be purchased from and installed by a participating contractor. †Estimated annual electricity cost savings are based on past program experience. Actual savings may vary. Save on Energy is powered by the Independent Electricity System Operator. ®Official Mark of the Independent Electricity System Operator. Used under licence.

Make the most of your new equipment

Use these handy tips to maximize your energy savings and the life of your new furnace and air conditioner.

High-efficiency furnace

Seasonal service

At the end of summer each year, have a licensed contractor service your system:

- Vacuum the burners.
- Remove and clean the blower.
- Clean the pilot light.
- Clean the flame sensor.

Mode matters

Set fan to 'auto' mode, as 'continuous' mode uses more energy.

Easy as 1-2-3

Replace filters every one to three months.

Right ratings

Use filters rated MERV 6 or higher.

Keep clear

Ensure vents are free from rugs, drapes, etc. to let air flow freely.

Hot tip!

Proper air sealing can reduce home heating needs by up to 30%.

Central air conditioner

#1 tip

Replace filters according to the manufacturer's instructions or more often, if you have pets.

Unclog coils

Clean debris, dust and pollen from condenser coils.

Let it breathe

Ensure airflow is not blocked by furniture, carpet or other items.

Set as high as comfortable

Save 10% in air conditioning costs for every 2°C increase in temperature.

Seasonal checks

Have a licensed contractor perform regular maintenance.

Reduce heat gain

Draw drapes during warm days to reduce heat load in your home.

Keep ducts air tight

Leaky ducts can reduce cooling efficiency up to 20%.

Fan setting

Set to 'auto' not 'on'.

ECM circulator pump

Routine checkup

For the highest efficiency, have your system serviced annually by a licensed contractor:

- Bleed radiators to keep free from air bubbles.
- Have automatic sensors recalibrated if necessary.

Stay safe

Make sure all power to the boiler is turned off before doing any maintenance or inspection.

Get a \$100 smart thermostat rebate

Installing a smart thermostat is one of the easiest ways to save energy year round. Get \$100 for an eligible smart thermostat, installed and registered on or after Dec. 13, 2017.

Get details on this and other rebates from Save on Energy and the Green Ontario Fund at

GreenOn.ca

Reduce home heating costs and get a rebate up to \$5,800* for heat pumps

Lower your energy use and live comfortably for less with a heat pump – we'll help with money-saving rebates!

Save up to \$5,800 Air-source heat pump (ASHP)

Benefits of upgrading

- Save up to 50% on heating costs† when you install an air-source heat pump
- Most eco-friendly space heating on the market
- Versatile installation options
- Provides highly efficient space cooling too

How a heat pump works

1. An air-source heat pump takes in air from outdoors
2. Using electricity, the pump compresses the air and releases it at a higher temperature
3. Heat is released into the home by fans
4. In summer, the cycle is reversed to provide energy-efficient cooling

Heat pumps are up to twice as efficient as traditional furnaces because moving heat uses much less energy than generating heat.

Rebates

Ductless ASHP	\$1,900
Ductless Multiport ASHP	Up to \$4,250
Ducted ASHP	\$3,250
Cold Climate Ductless ASHP	\$2,500
Cold Climate Ductless Multiport ASHP	Up to \$5,800
Cold Climate Ducted ASHP	\$5,500

How to qualify

- Must be a home or small business with electricity as primary heating source (70% of total heating load). Not electrically heated? Visit GreenOn.ca for more rebates and ways to save
- Must be ENERGY STAR® certified or CEE 'Tier-1' level systems (minimum efficiency SEER 15/HSPF 8.5/EER 12.5)
- Other qualifications may apply

How the program works

- 1 Work with a participating contractor to purchase and install your new equipment **before December 31, 2018**
- 2 Your contractor must submit your online rebate form by **February 1, 2019**
- 3 **Before February 28, 2019**, email your proof of purchase to: hvacpayments@summerhill.com
or mail to:

Make the most of your upgrades

Use these handy tips to maximize your energy savings and the life of your new equipment.

Air-source heat pump

Turn off your backup heating

Once your new system is installed, turn off your backup baseboard heater or electric furnace, which should only be used in extreme cold. If you do use your backup, be sure to turn it off as soon as the outdoor temperature begins to rise.

Regular tune-ups save

At least once a year, have a technician inspect and service the heat pump. A well-maintained heat pump saves **10 to 25% more energy** than a neglected system.

Protect from high winds and heat

Shelter outdoor units with plants and shrubs.

No need for a dehumidifier

On the cooling cycle, air-source heat pumps provide dehumidification; avoid running a separate dehumidifier or you'll increase energy use.

Demand defrost

If frost or ice build up on your outdoor unit, always use the demand-defrost cycle for energy savings, rather than the time-temperature defrost cycle.

Emergency mode

Unless it's a true emergency, avoid engaging the heat pump's 'emergency heat' feature.

Set to 'auto' mode

For maximum energy savings, keep the heat pump fan set to 'auto' rather than continuous.

Let it breathe

Ensure indoor units are free from furniture or other airflow obstructions.

Check and change

Inspect air filters monthly; clean/replace every two to six months, as recommended by the manufacturer.

Unclog coils

Brush or vacuum indoor coils as recommended by the manufacturer. Remove debris around outdoor coils as necessary.

Air tight

Leaky ducts can reduce efficiency by up to 20%.

More ways to save

From free customized advice to rebates on smart thermostats, heat pumps, windows and more, the Green Ontario Fund can help you shrink your home's carbon footprint and fight climate change.

Get \$100 for an eligible smart thermostat

Installing a smart thermostat is one of the easiest ways to save energy year round.

You may also qualify for rebates up to \$20,000 for heat pumps, windows and more!
